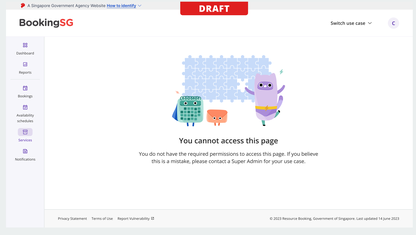
Forbidden errors (admin)

Admin does not have access to use case (MVP)



NOTES

- If admin is logged in and does not have permissions to access this use case, they should not be able to view the name of the use case in the nav bar.
- The "Admins" nav item in the sidenav is also not shown

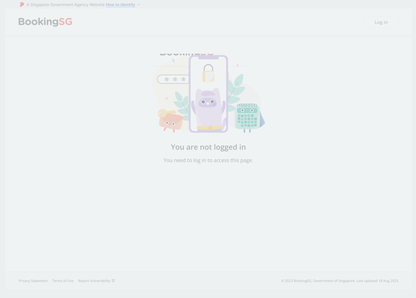
Vivienne

FOR MVP

- Side nav will be kept, every page that the admin clicks will show this error

Vivienne

Admin is not logged in (NEW just added 13 Jun)



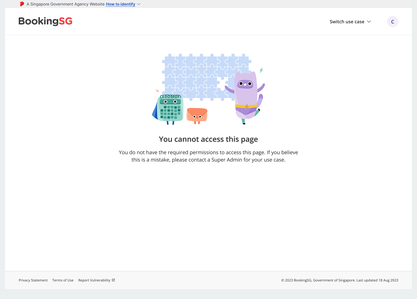
NOTES

- If not logged in, and tries to access an admin page, show this
- I'm not sure if this is the correct nav bar. The nav bar should be the generic nav bar that admins see before logging in

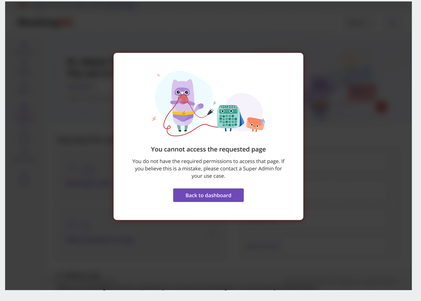
Vivienne

Future enhancement

Admin does not have access to use case



Admin has access to use case, but no access to certain pages



NOTES

- Redirect to the dashboard of the use case and open this modal

(Example: Admin pastes URL of "edit availability schedule" into the browser, but has no edit permissions)

(This is assuming the sections that the admin has no access to is hidden from them)
